What corrections did you have to make?

I had to add alt text to all of the images for each of the artist cards, and also the image in the footer.

I had to add a line of code in the html document that specified that the document/text on the page was in English.

I had to add aria labels to each of the buttons in the footer.

Do you think your website is usable if you turn off the CSS? Why or why not?

I think my website is usable if I turn off the CSS because the CSS only controls how the website looks in terms of the artist card presentation and other aesthetic features. The bulk of the aspects important to a user are in the html code for the website. If you turn off the CSS, you will still be able to see all of the artist cards, all of the aside, navigation and header sections will still be there, etc. CSS only controls the stylistic elements of my website, not the actual content.

Is your site is tabbable? In other words, without the use of the mouse, are all the links and buttons accessible using the tab key?

Yes! The website is tabbable. It allows me to tab through the sidebar, then header, then the navigation, then the artist cards and their play buttons, as well as the clickable options at the bottom of the page.
